SVACH, M. L. as

Method for determining nitrite with Rivanol. M. L. Svach and Jaroslav Zysa (Karis Univ., Prague). 2. anal. Chem. 145, 1-2 (1955). Rubel (Z. Unterzuch. Lebensmittel, 60, 588 (1932)) showed that Rivanol gives a stable red coloration with nitrite in the presence of dil. HCl. R. recommended the reaction for the colorimetric detn. of nitrite in water and in corned meats. The color absorption is greatest in a filter photometer at 525 mμ (green filter). The test is very simple and reliable. The color is stable for 50 min. To 50 ml. water add 10 ml. 0.1% Rivanol soln., then 15 ml. 0.1N HCl, shake, and dil. to the mark with distilled water.

✓ 2691. Use of catecholsulphonephthalein in colorimetric analysis. II. Photometric determination of thorium. M. Svach (Inst. Anal. Chem., Montan-hochschule, Ostrav, Czechoslovakia). Z. anal. Chem., 1956, 149 (6), 414-416. Catecholsulphonephthalein (catechol violet) (I) forms a red complex with Th in acidic soln. which permits its photometric determination. The Beer - Lambert law is obeyed for 100 to 600  $\mu$ g of Th in 25 ml of soln. Complexing anions,  $\text{Fe}^{3+}$  (red complex with I) and Bi (blue complex with I) interfere. Procedure—Add to the soln. of Th (100  $\mu$ g per ml) a drop of 0.1 per cent.  $\text{NaI}$  and dilute to 25 ml with acetic acid - Na acetate buffer (pH 3.0). Determine the extinction at the absorption max. (480 m $\mu$ ) after 20 min. J. P. STERN

2338. Use of catecholsulphonaphthalein in colorimetric analysis. III. Photometric determination of copper. M. Svach (Inst. Anal. Chem., Montan. Hochschule, Ostrava, Czechoslovakia). Z. anal. Chem., 1956, 143 (6), 417-419. —Catecholsulphonaphthalein (catechol violet) forms an intense blue complex (absorption max. at 630 mμ) with Cu in neutral solution. Although suitable for the photometric determination of Cu, this reaction suffers interference from Pb, Ag, Hg, Bi, Sn, Sb, Ni, Zn, Cr, Fe, Mg, Ca, Sr and Ba, and is thus of interest for only pure soln. of Cu. The Beer-Lambert law is obeyed for 100 to 800 μg of Cu in 25 ml of soln., and the colour is fully developed after 15 min.

SVACHULOVA, JIRINA.

Effect of L-ascorbic acid on the growth and metabolism of *Mycobacterium tuberculosis*. Jirina Svachulová (Výzk. ústav tuberk., Prague). *Rozhledy v tuberk.* 15: 320-24 (1955).—Inhibitory concns. of L-ascorbic acid (I) depend on the amts. of proteins (II) in soln. Thus 2.0–4.0 mg. I/ml. inhibit in media contg. 1.5% II, 0.4–2.0 mg. I/ml. in the presence of 0.25% II, and 0.4–1.0 mg. I/ml. in the absence of II. This dependence is explained by the binding or absorption of I by II. At 38° I decomp. in the medium within 3 hrs. Stimulatory effect of trace concns. of I (0.02–0.001 mg./ml.) on the growth of *M. tuberculosis* is not observed. Attempts at adapting *M. tuberculosis* to media with const. and increasing concns. of I fail. At const. amts. of I a greater no. of passages is achieved in media contg. high content of II (2.5%) than in those contg. under 0.25% II. Cultures passed through media with increasing concns. of I show a stoppage of growth at lower concns. of I than the unpassed ones. L. J. Urbánek

SVACHULOVÁ J.

Effect of L-ascorbic acid on the growth and metabolism of  
Mycobacterium tuberculosis. J. Svachulová (Výzk. ústav  
tuberk., Prague), Rozhledy Tuberk., 10, 203-6 (1958);  
cf. C.A. 49, 16069g. L-Ascorbic acid (I) in concns. 60 and  
100 mg. per ml. of bacterial suspension inhibits the growth  
of M. tuberculosis by interfering with the oxidation-reduction  
system. A 2-day contact of the microbe with I results in a  
50% decrease in O<sub>2</sub> consumption as well as in a considerable  
loss of the reducing activity. L. Svachulová

EXCERPTA MEDICA Sec.17 Vol.4/4 Public Health, etc. Apr 58

*Švachulová J.*

1245. A COMPARATIVE STUDY OF VIT. C CONSUMPTION OF TUBERCULOUS PATIENTS AND HEALTHY CONTROLS - Srovnání spotřeby vitamínu C u tub. nemocných a u zdravých lidí - Švachulová J., Nedvědová V., Wagner J. and Kraus P. Výzkumn. Úst. Tuberk., Praha - ROZHL. TUBERK. 1957, 17/3 (195-206) Graphs 6 Tables 7

The vit. C deficiency of patients suffering from tb varies from 140 to 7,000 mg. and is mostly in the range of 3,000 mg. This deficiency was not found in healthy subjects. The daily amount of vit. C required in tuberculous patients without vit. C deficiency is 100-200 mg.; in healthy subjects this amounts to 50 mg. Daily administration of 1,000 mg. vit. C to patients admitted to the sanatorium during the first week of treatment is recommended; thereafter a daily amount of 200 mg. is given. There is no danger from overdosage. Administration of antibiotics did not influence the vit. C level.

Title : The Influence of Large Doses of l-Ascorbic Acid on the  
Course of Experimental Tuberculosis in Guinea Pigs

Orig Pub : Rozhl. tuberk. a nemocech. plicnich, 1957, 17, No 7,  
529-535

Abstract : The content of l-ascorbic acid (I) in the adrenals (A)  
and spleen in guinea pigs infected with tuberculosis is  
decreased (in A 10.8 mg%, in control 21.8 mg%; in spleen  
3.7 mg%, in control 13.3 mg%), even if it does not change  
in the blood (0.1 mg%). With introduction of I, its con-  
centration increases considerably more in the internal  
organs of healthy guinea pigs than in those with tubercu-  
losis. The introduction of increased doses (20 mg) of I

APPROVED FOR RELEASE: 08/31/2001  
"Physiological Effects of Extreme Values of Intrapulmonary Oxygen Overpressure. II. Excretion of 3-Methoxy-4-Hydroxy-mandelic Acid and 3-Methoxy-4-Hydroxyphenylacetic Acid in Man."

Prague, Ceskoslovenska Fysiologie, Vol 15, No 2, Feb. 65, p 73

Abstract: Positive pressures of 0.04 to 0.2 kg/cm<sup>2</sup> were investigated. Increase of pressure by 33 mm Hg increases the amount of excreted acids only very little, while a pressure of 74 mm Hg increases this amount significantly. Experiments were conducted using flying personnel and mountain climbers. Changes of pressure seem to influence hormonal components of the responses of the organism. 3 Czech references. Submitted at the "16 Days of Physiology" at Kosice, 27 Sep 65.

TITLE: EEG shifts in personnel working around centimeter wave sources

SOURCE: Ceskoslovenska neurologie, no. 6, 1966, 402-406

TOPIC TAGS: microwave<sup>radiation</sup>, biologic effect, EEG, industrial medicine, central nervous system

ABSTRACT: A total of 115 radar technicians who had been working around 3—10-cm generators for an average of 3.7 years were given EEG examinations. Daily exposure duration for the technicians averaged 2 1/4 hrs and exposure power density was 0.2 mw/cm<sup>2</sup>. EEG findings were normal in 31.2% of those studied, nearly normal in 55%, slightly abnormal in 9.5%, and definitely pathological in 4.2%. "Sleep activity" was observed in 28.1% of the cases. The radar technicians exhibited neurasthenic symptoms which corresponded to the EEG findings. Orig. art. has: 2 figures and 1 table. [CD]

TITLE: Remarks concerning some similarities of clinical and x-ray findings in lumbar discopathies 22

SOURCE: Vojenske zdravotnicke listy, no. 4, 1961, 153-154

TOPIC TAGS: bone disease, radiography, clinical medicine, man, surgery, diagnostic medicine

ABSTRACT: X-ray findings are very variable and not reliable for making a diagnosis. The spine undergoes certain changes caused by advancing age, and these can influence the x-ray evaluation. The authors investigated 250 patients treated by conservative means and 240 who underwent surgery. Forty-six percent of the discopathies occurred between the ages of 30 and 40. Irritation symptomatology prevails in young patients;

TITLE: Value of x-ray examination for indication of surgical treatment of lumbar discopathies 22

SOURCE: Vojenské zdravotnické listy, no. 4, 1965, 154-156

TOPIC TAGS: x ray investigation, clinical medicine, bone disease, surgery

ABSTRACT: Clinical and x-ray findings in 240 patients who underwent surgery in a period of 2 years at the clinic and the hospital where the authors' work is discussed. Pneumoperimyelography gives more reliable data than x-rays; in 50%, localizations were found by this method. Clinical findings are the most reliable; in disc L5, surgery confirmed 91.2% of the findings; in disc L4, 70% were confirmed. Orig. art. has: 3 tables. [JPRS]

TITLE: Evaluation of x-ray findings in patients suffering from lumbosciatic syndrome 22

SOURCE: Vojenske zdravotnické listy, no. 4, 1965, 156-157

TOPIC TAGS: man, x ray investigation, nervous system disease

ABSTRACT: 250 patients treated conservatively for lumbago and lumbosciatic syndrome were investigated. In 24%, the x-ray findings were normal, in 44.4% the changes were not specific, and only in 31.6% of the patients was there an indication of the location of spinal damage. Of these, one-third does not correspond to clinical findings. The x-ray examination can be considered only a help, but it should not be overrated. Orig. art. has: 1 table. [JPRS]

Prague, Ceskoslovenska Fysiologie, Vol 15, No 2, Feb. 65, p 13

Abstract: Positive pressures of 0.04 to 0.2 kg/cm<sup>2</sup> were investigated. Increase of pressure by 33 mm Hg increases the amount of excreted acids only very little, while a pressure of 74 mm Hg increases this amount significantly. Experiments were conducted using flying personnel and mountain climbers. Changes of pressure seem to influence hormonal components of the responses of the organism. 3 Czech references. TITLE: Synthesis of the  $\omega$ -Oxypentadecanic Acids by the Method of "Intersecting" Electrolytic Condensation. II (Polucheniye  $\omega$ -oksipentadekanovoy kisloty metodom "perekrestnoy" elektroliticheskoy kondensatsii. II)

PERIODICAL: Zhurnal obshchey khimii, 1958, Vol. 28, Nr 8, pp. 2268-2273 (USSR)

ABSTRACT: In this report the authors describe the conditions under which the electrolytic condensation of the  $\omega$ -acetoxyundecanic acids with the monomethyl ester of adipic acid takes place. These conditions give a 25-27% yield of oxypentadecanic acid. When a large number of electrolysis products have been obtained an exact investigation of other compounds arising in these reactions can be undertaken. As is known, the Kolbe (Kol'be) synthesis is accompanied by a number of side reactions, whose nature depend on the experimental conditions. The synthetic products were investigated which formed in the "intersecting" (perekrestnaya) electrolytic condensation, modified after Kolbe.

Card 1/3 This mixture contained the ethyl ester of  $\omega$ -acetoxyundecanic

acid (16%), the diethyl ester of sebacic acid (18%), the acetate of eicosandiol (10%), the ethyl ester of pentanic acid (2%), the ethyl ester of pentenic acid (2%), the acetate of decyl alcohol (3-4%), the acetate of decene alcohol (3-4%), the acetate of decandiol (about 0,5%), the diethyl ester of adipic acid (3%), adipic acid (7%), the monoethyl ester of this acid (3%), and  $\omega$ -acetoxyundecanic acid (below 1%). It was shown that the formation of separate compounds can be explained on the basis of their common assumed behavior according to the mechanism of the Kolbe reaction. There are 25 references, 7 of which are Soviet.

TITLE: Effect of ultrasound on body temperature in rats

SOURCE: Fiziologichnyy zhurnal, v. 9, no. 3, 1963, 395-396

TOPIC TAGS: ultrasound, body temperature, rat

ABSTRACT: Despite the many studies of the effect of ultrasound on rat tissues, there is no reference in the literature to its effect on any of the automatic functions. The author took a Siemens Zonostat Junior 800 kc ultrasound and attached a 9 square cm. pulser to a shaved area on rat's skin. Using 20 experimental and 10 control animals, he applied 0.14, 0.85 and 2 watts per square cm., for 30 seconds, then measured body temperature at a rectal depth of 2 centimeters. He observed a definite elevation of rectal temperature of varying degree and duration after the fourth to sixth application, after which it gradually returned to normal. A total of 770 temperature measurements was taken.

"Contribution to the Problem of the Use of Suspensions of Hexachlorane-Bentonite  
in Dicrocoeliasis in Sheep and Goats"

This work describes an experiment performed to check the data of Kaplan and Sakkelariu (1947) who killed all the dicrocoelia and young forms of fasciolae in 4 sheep after treating them with suspensions of hexachlorane-bentonite, prepared by the Olson method. The experiment was performed in 1950 on 8 sheep under conditions excluding the possibility of reinvasion.
